Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments:

During the interview on 9/27/05, Mr. David P. Emery, attorney of record, points out that the embodiment claimed by claim 1 is shown in Fig. 2. Figure 2 shows the magnets formed as trapezoidal shapes 25G that gradually increase in both a width and thickness (i.e. 23 is demarcating the narrowest portion of both the width and thickness of trapezoidal magnets 25 G) toward a base side 19b of the claw magnetic pole. The end of a magnet facing the base 19b is thicker in both a width and a thickness than that portion of the adjacent magnet following the pointer from no. 23. Additionally, support can be found in the specification on page 8, lines 4-9, magnets "gradually increase in thickness toward the base side." And further, page 8, lines 10-12, "face of magnet assembly 25 being in contact with the claw magnetic poles 21, 22 is also trapezoidal plate-shaped extending along the magnetic pole."

The Examiner concurs with the applicant's remark; therefore, the rejection based on first paragraph of 35 U.S.C. 112 is hereby withdrawn.
